HOPE, IS NOT A VAIN WORD

Hope is one of the most beautiful word.

A word which enlightens the future, fills our hearts and makes us stronger.

With more than 620.000 euros raised in 12 years for MS Research, Cabourg Show Jumping became an essential source of hope in the fight against Multiple Sclerosis.

Cabourg Show Jumping is a unique charity event where equestrian and scientific worlds get together and share the same determination to surpass themselves, to jump over the fences.

The ARSEP Foundation is resolutely pursuing its determined and effective mission while Cabourg Show Jumping gathers the best riders and horses to offer one of the very best sporting events, and to remind us how much we need hope. Hope of happiness, success, treatment...

I thank all our partners for their support and I wish you all a fantastic week in Cabourg.

Laurence Meunier

President of Jumping de Cabourg

SINCE 2004,
CABOURG SHOW-JUMPING HAS RAISED
OVER **620.000 €** TO FIGHT MS

A SPORTIVE CHALLENGE

JUMPING DE CABOURG

25th to 29th May, 2016 - Free admission

A unique charity event where equestrian and scientific worlds get together to fight Multiple Sclerosis.

All riders, professional and amateurs know very well this national horse show, undoubtedly one of the most important in France:

800 riders, 55 events and 3000 runs over 5 five days, 600 horses staying on site, 4 arenas – 2 grass and 2 sand – and 15.000 visitors

SCHEDULE 2016

WEDNESDAY 25th & THURSDAY 26th

- **Young horses**

FRIDAY 27th

- **7 years old horses (1m30)**

> Reserved for 7 years old horses. Test event for Saturday Grand Prix TOP7 Equidia Life

SATURDAY 28th

- **Speed event Pro 1 Région Normandie (1m40)**

> Reserved for future international champions

- **Roses Cocktail and gala dinner**

> 200 guests attending the gala dinner and auction to benefit the ARSEP foundation

SUNDAY 29th

- **Grand-Prix ARSEP – Ville de Cabourg (1m45)**

> An event promising plenty of excitement and emotion with 40 professional riders.

- **4 Grands Prix Amateurs**

- **Département du Calvados Championship finals**

SINCE 2004,
CABOURG SHOW-JUMPING HAS RAISED
OVER **620.000 €** TO FIGHT MS

A SPORTIVE **CHALLENGE**

Jumping over the fences on a horseback can easily symbolize the life course of someone suffering from Multiple Sclerosis. Every attack is an obstacle you have to learn to overcome. Each period of remission is an intervening period requiring a true management of the body and spirit in order to find your balance back and cope with the next attack.

As riders guide their horses, doctors and researchers are involved in the care of their patients. Each one within its own area of competency is linked to the other by passion, trust and hope.

SPORT DOES NOT INCREASE THE RATE OR SEVERITY OF MS

> Current research indicates that MS patients can gain a wide variety of therapeutic and functional benefits from regular physical activity.

> The primary benefits of regular exercise for people with MS include:

- **Increased cardiorespiratory fitness**
- **Improved muscle strength and endurance**
- **Reduced systemic fatigue**
- **Improved mood**
- **Improved ability to perform tasks of daily living with increased vigor**

> Exercise also reduces the risk of comorbidities such as obesity, heart disease, diabetes and osteoporosis.

SINCE 2004,
CABOURG SHOW-JUMPING HAS RAISED
OVER **620.000 €** TO FIGHT MS

A SPORTIVE CHALLENGE

THE BIGGEST SHOW JUMPING IN FRANCE A SPORTIVE CHALLENGE

- 5 days - 55 events
- 600 horses staying on site
- 800 riders
- 3 000 runs
- 8 000 sqm sand arenas
- 15 000 sqm grass arenas
- 350 000 € budget (of which 2/3 are sponsored by partners)

MULTIPLE SCLEROSIS

NEUROLOGICAL DISEASE, CHRONIC AND CATASTROPHIC

Multiple sclerosis (MS) is one of the most common diseases of the central nervous system (brain and spinal cord). Today more than 2,300,000 people around the world have MS.

MS is an inflammatory demyelinating condition. This means it is caused by damage to myelin – a fatty material that insulates nerves, acting much like the covering of an electric wire. Myelin allows a nerve to transmit its impulses rapidly. It is the speed and efficiency with which these impulses are conducted that permits smooth, rapid and co-ordinated movements to be performed with little conscious effort.

In MS, the loss of myelin (demyelination) is accompanied by a disruption in the ability of the nerves to conduct electrical impulses to and from the brain. This produces the various symptoms of MS. The sites where myelin is lost (plaques or lesions) appear as hardened (scar) areas: in multiple sclerosis these scars appear at different times and in different areas of the brain and spinal cord. The term multiple sclerosis means 'many scars'.

MS symptoms vary widely and include blurred vision, weak limbs, tingling sensations, unsteadiness and fatigue. For some people, MS is characterised by periods of relapse and remission while, for others, it has a progressive pattern. For everyone with MS, it makes life unpredictable.

QUICK MS FACTS

- MS is a progressive disease of the central nervous system, for which there is no cure at present.
- More women than men have MS, with a ratio of three women to two men.
- MS is the most common disease of the central nervous system in young adults.
- MS is not directly hereditary, although genetic susceptibility plays a part in its development.
- MS is not contagious or infectious.
- Diagnosis of MS is generally between 20 and 40 years of age, although onset may be earlier.
- There are a wide range of symptoms, with fatigue being one of the most common.
- The incidence of MS increases in countries further from the equator.
- There is no drug that can cure MS, but treatments are now available which can modify the course of the disease.
- Many of the symptoms of MS can be successfully managed and treated.

SINCE 2004,
CABOURG SHOW-JUMPING HAS RAISED
OVER **620.000 €** TO FIGHT MS

CABOURG SHOW JUMPING: **4TH BIGGEST PARTNER** OF THE ARSEP FOUNDATION

YEARS	AMOUNTS	HEADS OF PROJECTS	PROJECTS
2004	17 198,00 €	Catherine SOULA (Toulouse)	Etude des mécanismes moléculaires et cellulaires de la spécification des précurseurs oligodendrocytaires dans la moelle épinière embryonnaire de vertébrés
2005	30 095,00 €	Patrick VOURCH (Tours)	Fonction d'Omgp dans la myélinisation par les oligodendrocytes
2006	25 560,00 €	Sean MORRISSEY (Rennes)	Détection et quantification automatique des prises de contraste de gadolinium en IRM dynamique dans les lésions et dans la matière blanche d'apparence normale pour la SEP.
2007	32 620,00 €	Catherine LUBETZKI (Paris)	Molécules de guidage et remyélinisation dans le système nerveux central
2008	55 421,00 €	Jean-Paul SOULILOU David Axel LAPLAN (Nantes)	Molécules de guidage et remyélinisation dans le système nerveux central
2009	63 000,00 €	B. Nait OUMESMAR (Paris) Emmanuelle LERAY (Rennes)	Etude du rôle des entrées synaptiques des cellules NG2 au cours de la myélinisation et la remyélinisation. Etude multicentrique française de la mortalité des patients atteints de Sclérose en Plaques.
2010	48 430,00 €	Béatrice PIGNOLET (Toulouse)	Etude de la réactivité immunologique croisée entre deux auto-antigènes, MOG et NF-M, conduisant au phénomène d'auto-immunité cumulative dans un modèle murin.
2011	43 585,00 €	Gilles DEFER Fabien DOCAGNE (Caen)	Blocage de l'interaction entre tPA et les récepteurs NMDA : une immunothérapie pour la sclérose en plaques.
2012	60 085,00 €	David LAPLAUD (Nantes) Klaus DORNMAIR (Munich)	Analyse de l'implication des «MAIT Cells» dans la physiopathologie de la sclérose en plaques.
2013	76 905,00 €	TAN YOSSAN VAR (Rouen)	Dissection du rôle des récepteurs du VIP et PACAP dans la pathogénèse et thérapies de la Sclérose en Plaques.
2014	65 587,00 €	Catherine SOULA (Toulouse)	Rôle de Sulf2 dans le contrôle du développement de sous-populations gliales dans le système nerveux central
2015	91 267,00 €	Bruno STANKOFF Benedetta BODINI (Paris, Londres, Mineapolis)	Le développement de techniques d'imagerie capables de mesurer l'atteinte fonctionnelle cellulaire, qui pourrait précéder la dégénérescence, serait d'un apport considérable pour évaluer les mécanismes précoces impliqués dans les phases progressives de la SEP
TOTAL	609 753,00 €	For la Fondation ARSEP	
2007	19 320,00 €	Association A.R.S. (Paris)	Recherche sur la Sclérose latérale Amyotrophique
TOTAL GÉNÉRAL	629 073,00 €	For scientific research
